

The Global Fund's 2017-2022 strategy and allocation-based approach enables strategic investment to accelerate the end of HIV/AIDS, tuberculosis and malaria and build resilient and sustainable systems for health. Allocations are made once every three years following the outcomes of the Global Fund's replenishment. The Global Fund 2017 Eligibility List identified which country components (HIV/AIDS, tuberculosis or malaria) were eligible to receive an allocation for the 2017-2019 period. Please note that eligibility does not guarantee an allocation.

The list set forth below reflects the eligibility determinations for the year 2018 and is for information purposes only. If a country has no eligible components, it does not appear on the list.

The Global Fund's Eligibility Policy¹ is designed to ensure that available resources are allocated to countries with the highest disease burden and lowest economic capacity and to key and vulnerable populations disproportionately affected by the three diseases. Eligibility is determined by a country's income classification², as measured by Gross National Income (GNI) per capita (World Bank Atlas Method), and official disease burden categorization³.

A multi-country application is only eligible for funding where the majority (at least 51 percent) of countries included in the application would be eligible to submit their own request for funding for that same disease through a single-country application.

Please refer to the notes that follow the list for additional information. Please direct questions about the list to: accesstofunding@theglobalfund.org

Eligibility List 2018, March 2018 revision

¹ Global Fund Eligibility Policy, as set forth in Annex 2 to GF/B35/06 – Revision 1 and approved by the Board in April 2016 under decision point GF/B35/DP07.

² The Global Fund uses an average of available GNI per capita data (World Bank Atlas Method) over the latest three-year period in order to determine a country's income classification. Please see Notes for more information on how averages are calculated.

³ The latest available disease burden data is provided by headquarters of UNAIDS for HIV and WHO for tuberculosis and malaria. Annex A of the Eligibility Policy provides disease burden indicators and thresholds used to determine eligibility.

| Country | Income | Disease | Disease | Eligibility |
|-------------------------------|-----------|-----------|----------|---|
| , , | Category | Component | Burden | |
| Afghanistan | LI | HIV | Moderate | Yes |

Notes to changes in eligibility status

^a The indicated country component was eligible for a final allocation of Transition Funding in the 2017-2019 allocation period. This country component is no longer eligible for future allocation funding.

^b Algeria's HIV/AIDS disease burden classification changed from 'Moderate' in the 2017 Eligibility List to 'High' in the 2018 Eligibility List, resulting in one determination of eligibility. Country components must be eligible for two consecutive eligibility determinations to be classified as eligible on the Eligibility List.

^c Armenia is newly classified as an Upper-Middle Income country as per the three-year average of GNI per capita data (Atlas method) and income classification thresholds published by the World Bank. As a result the HIV component is now eligible for a final allocation of Transition Funding.

^d Armenia is newly classified as an Upper-Middle Income country as per the three-year average of GNI per capita data (Atlas method) and income classification thresholds published by the World Bank. As a result the TB component is now eligible for a final allocation of Transition Funding.

^e Botswana's malaria disease burden classification changed from 'Moderate' in the 2017 Eligibility List to 'High' in the 2018 Eligibility List, resulting in one determination of eligibility. Country components must be eligible for two consecutive eligibility determinations to be classified as eligible on the Eligibility List.

^f Since Bulgaria is not on the OECD DAC list of ODA recipients, Bulgaria's HIV/AIDS program may only be eligible for funding for HIV/AIDS under the NGO rule (see notes) provided they meet NGO rule criteria detailed in paragraph 11 of the Global Fund Eligibility Policy. The political barriers criteria required under the NGO rule are assessed every three years in line with the allocation cycle.

⁹ Ecuador's malaria disease burden classification changed from 'Moderate' in the 2017 Eligibility List to 'High' in the 2018 Eligibility List, resulting in one determination of eligibility. Country components must be eligible for two consecutive eligibility determinations to be classified as eligible on the Eligibility List.

^h Egypt was determined to be malaria-free, attaining 3 consecutive years of zero indigenous cases as per the World Malaria Report 2017. Egypt's malaria component is thus classified as not eligible in the 2018 Eligibility List.

ⁱ In line with the flexibilities allowed under the Challenging Operating Environments Policy, Iraq TB was determined eligible for the 2017-19 allocation period.

^j Jordan's HIV/AIDS component is now classified as eligible in the 2018 Eligibility List after meeting eligibility criteria for two consecutive eligibility determinations, noting that eligibility does not guarantee an allocation.

^k Jordan's TB disease burden classification continues to be 'Low', however Jordan's income classification has changed from 'Upper-Middle Income' country to 'Lower-Middle Income' country, resulting in one determination of eligibility. Country components must be eligible for two consecutive eligibility determinations to be classified as eligible on the Eligibility List.

¹ Kyrgyzstan was certified as malaria-free by WHO in 2017. Kyrgyzstan's malaria component is thus classified as not eligible in the 2018 Eligibility List.

^m Since Romania is not on the OECD DAC list of ODA recipients, Romania's HIV/AIDS program may only be eligible for funding for HIV/AIDS under the NGO rule (see notes) provided they meet NGO rule criteria detailed in paragraph 11 of the Global Fund Eligibility Policy. The political barriers criteria required under the NGO rule are assessed every three years in line with the allocation cycle.

ⁿ Since the Russian Federation is not on the OECD DAC list of ODA Recipients, the Russian Federation may only be eligible for funding for HIV/AIDS under the NGO rule (see notes) provided that they meet the NGO Rule criteria detailed in paragraph 11 of the Global Fund Eligibility Policy. For 2018, the Russian Federation's income classification changed from 'High Income' to 'Upper-Middle Income', and its disease burden classification is 'High', resulting in one determination of eligibility based on income classification and disease burden for purposes of paragraph 4a of the Global Fund Eligibility Policy. Country components under the NGO rule must be eligible for two consecutive eligibility determinations based on income classification and disease burden. The political barriers criteria required under the NGO rule are assessed every three years in line with the allocation cycle.

^o Syrian Arab Republic was determined to be malaria-free, attaining 3 consecutive years of zero indigenous cases as per the World Malaria Report 2017. Syria Arab Republic's malaria component is thus classified as not eligible in the 2018 Eligibility List.

^p Tunisia's TB disease burden classification continues to be 'Moderate', however Tunisia's income classification has changed from 'Upper-Middle Income' country to 'Lower-Middle Income' country, resulting in one determination of eligibility. Country components must be eligible for two consecutive eligibility determinations to be classified as eligible on the Eligibility List.

^q Uzbekistan was determined to be malaria-free, attaining 3 consecutive years of zero indigenous cases as per the World Malaria Report 2017. Uzbekistan's malaria component is thus classified as not eligible in the 2018 Eligibility List.

Notes on methodology

Income classification: The Global Fund's income level eligibility is based on the World Bank (Atlas Method) Income Classifications: Low Income Countries (LICs); Lower-Middle Income Countries (LMICs); and Upper-Middle Income Countries (UMICs). As per the Eligibility Policy, the Global Fund uses the latest three-year average of GNI per capita data (Atlas Method) published in December 2017 to determine income classification based on the latest World Bank classification thresholds updated in July 2017. In case of non-availability of World Bank GNI-per-capita data for one or more years, an average of the available data from the latest three year period (e.g. two years) was used. In the absence of any GNI-per-capita data for the latest three-year period, World Bank income classifications for last three years, if consistent, were used to determine income classifications. The Global Fund classification further divides LMICs into two groups, namely Lower-LMICs and Upper-LMICs based on the midpoint of the GNI per capita range of the World Bank's LMI category. This division of LMICs does not affect eligibility but is relevant to the Global Fund co-financing requirements set forth in the Sustainability, Transition and Co-financing Policy (Annex 1 to GF/B35/04 -- Revision 1).

Disease burden: Disease burden data are provided to the Global Fund Secretariat by WHO and UNAIDS. The Disease burden classifications used by the Global Fund in decreasing order of burden are Extreme, Severe, High, Moderate and Low. The disease burden criteria apply to UMICs in order to determine their eligibility, with the exception of the 'malaria-free' criterion (below) which applies to all countries regardless of income level:

- Members of the Group of 20 countries (G-20 members) that are UMI with less than an 'Extreme' disease burden are not eligible to receive an allocation and apply for funding, unless they meet the criteria to apply under the 'NGO Rule.'
- UMICs with 'Moderate' or 'Low' disease burden are not eligible to receive an allocation and apply for funding. UMICs that are designated under the 'small island economy exception' to the International Development Association lending requirements are eligible for funding regardless of national disease burden.
- For HIV: UMICs must be listed on the OECD's DAC list of ODA recipients to be eligible to receive an allocation and apply for funding, unless they meet the criteria to apply under the 'NGO rule.'
- For malaria:
 - The Global Fund uses malaria data from earlier years (2000), as recommended by WHO.
 Each year WHO provides revised 2000 estimates, which has changed the disease burden classification for some countries; and
 - Countries that are certified as 'malaria-free' by WHO or are on the WHO's 'Supplementary List' of countries where malaria never existed or disappeared, are not eligible to receive an allocation for malaria or apply for malaria funding, regardless of their income level, but may receive transition funding.

NGO rule: For HIV/AIDS only, UMICs that have a reported disease burden of 'High', 'Severe', or 'Extreme' and are not on the OECD-DAC list of ODA recipients may only be eligible to receive an allocation if they meet all the conditions as described in paragraph 11 of the Global Fund Eligibility Policy.

Transition funding: Components funded under an existing grant that become ineligible may receive funding for up to one additional allocation period following their change in eligibility. The Secretariat, based on country context and existing portfolio considerations, will determine the appropriate period and amount of funding for priority transition needs.

• Transition ^(year): Components that become ineligible and may receive transition funding for up to one allocation period following their change in eligibility in accordance with the Global Fund Eligibility Policy. (*Year*) represents the year corresponding to the eligibility determination in which the component became ineligible.
